

# ScrumForce

Full management, follow-up & consolidation for scrum teams

# Manage Scrum Development and track progress

Scrum is a lightweight software development framework. Functionality is delivered in iterative cycles with short and immediate feedback.

ScrumForce is a collaboration solution. It gives teams and their customers immediate and transparent visibility. ScrumForce's hierarchical structure links sprints and stories. It tracks work, assignments and consolidation in one, comprehensive overview

## Business Benefits

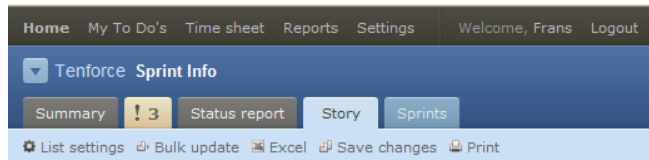

ScrumForce has End to End Scrum support for:

- **Transparent** scope management,
- **Accurate planning** based on real availability,
- Effortless **Day to Day monitoring**,
- **Keep track of decisions** on planning, scrum and retrospective meetings,
- Time saving **auto-calculate features** for planned work, actual work and velocity.

# Product Features

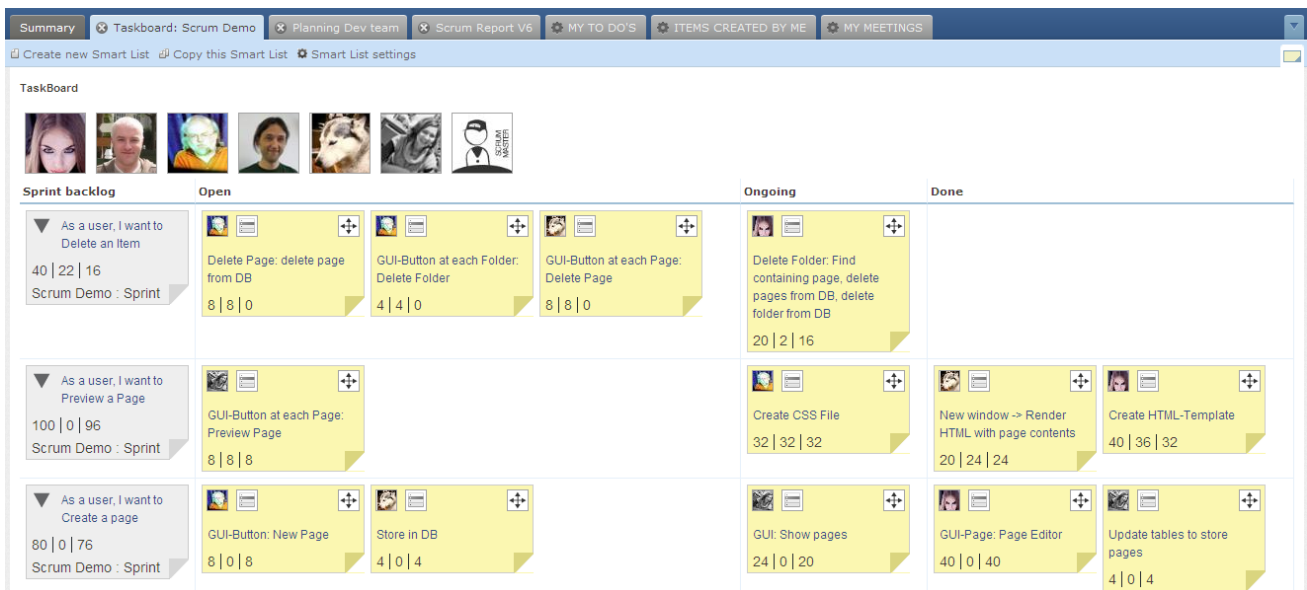

## Clear and comprehensive overview

The ScrumForce tabs give immediate access to sprints and their composing stories. Status reports give a one-click overview on what happened/planned/late.

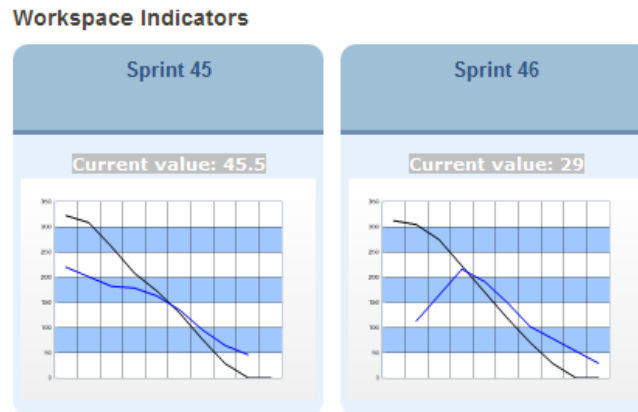

## Visual and Intuitive Task board

ScrumForce imitates and improves the visual task board that teams without tools typically use. It provides a very visual feedback on the progress. More over it has been tuned for quick drag & drop manipulations for Owner and Status changes.

## Automatic Burn down calculations

Depending on the work completion, there is an up to the hour correct view of where the team is in terms of finished versus actual work. The available capacity is driven by the team resource calendar.

## Full audit trailing

Each task/story/sprint editing is kept in a standard audit trail. This helps teams to find quickly the history of what happened.

## Comprehensive dashboard

Instead of sticky notes, stories are shown on a drag&drop dashboard with columns for 'Open', 'Ongoing' and 'Done'. Priorities are color coded to make sure higher priority stories are tackled first.

## Keep track of planned, actual effort and ETC

ScrumForce keeps track of 3 simple attributes:

- How much time is planned?
- How much time is already planned?
- How much time is required to complete?

These attributes are consolidated automatically from the individual task to the story level and up to the sprint level.

PLANNED EFFORT (HOURS)	266	ACTUAL EFFORT (HOURS)	8.5
<a href="#">LIST</a> <a href="#">Sprint Info</a> : <a href="#">Sprints</a>		<b>ETC (HOURS)</b> 257.5	
▼ 444	<b>Story 47.FUNC.7016 : Time Sheet Manager Functions</b>		
4322	Create object structure to support Time Sheet Overview screen		
4323	Create bul methods to support Time Sheet Overview screen		
4326	Add Organization unit picker to timeheets to approve		
4327	Add a Month picker + logic to refresh list of timesheets		
4329	Add WebMethods to retrieve timesheet data		
4328	Add grid view that displays the data of the selected period ( + JS)		

# Licenses or subscriptions

ScrumForce is offered in two flavors: Licensed based or Subscription based. You can also use the TenForce servers to host your application, or you can select to install on your own server.

## Server Licenses (includes 20 users)

With a one-time payment, you can get a license for

- Installation on your own server,
- One year maintenance (includes support, access to new versions)
- 20 users included
- Contact us for extra user packs and volume discounts
- No recurring fees
- After 1 year, the maintenance can be renewed at 18% of the license price.

## Subscriptions

With a monthly subscription per user, you have access to the following services

- Unlimited access to support and to new versions of the software
- Price decreases as more users are connected
- Can be cancelled every month
- Discount for yearly subscriptions

## TenForce Hosted

We can host ScrumForce for you so you don't have to worry about a thing:

- Automatic version upgrade
- Automatic Backup
- Dedicated Server
- Available both for licensed software and subscription based.

## More information

To get a demo (onsite or using screen sharing) or to get a trial version, please contact us.

We can set up a special demo environment for you and your organization. We provide some sample data so you can see already how the tool works. We create a login based on your email address. You can invite up to 4 other team members to participate in the trial. Note that during the trial, nobody else will be using your instance so nobody will see your data.
