TENFORCE ✕ PDC EHSQ SOFTWARE

Environmental Management

Collect, analyze and report environmental and sustainability performance across your entire organization.

Environmental Management That Goes Further Than Just Data Reporting

Stay on Track with Key Objectives and KPI Management

- Set goals and objectives for environmental sustainability and regulatory compliance
- Assign actions to the relevant role, group or individual
- Keep on track with alerts, reminders and comprehensive overviews

Access Regulatory Intelligence

- Access standardized, evidence-based, verifiable and measurable EHS content from Enhesa
- Establish a uniform quality of EHS information across all your locations
- Identify, assess, maintain and report on the current compliance status of your locations
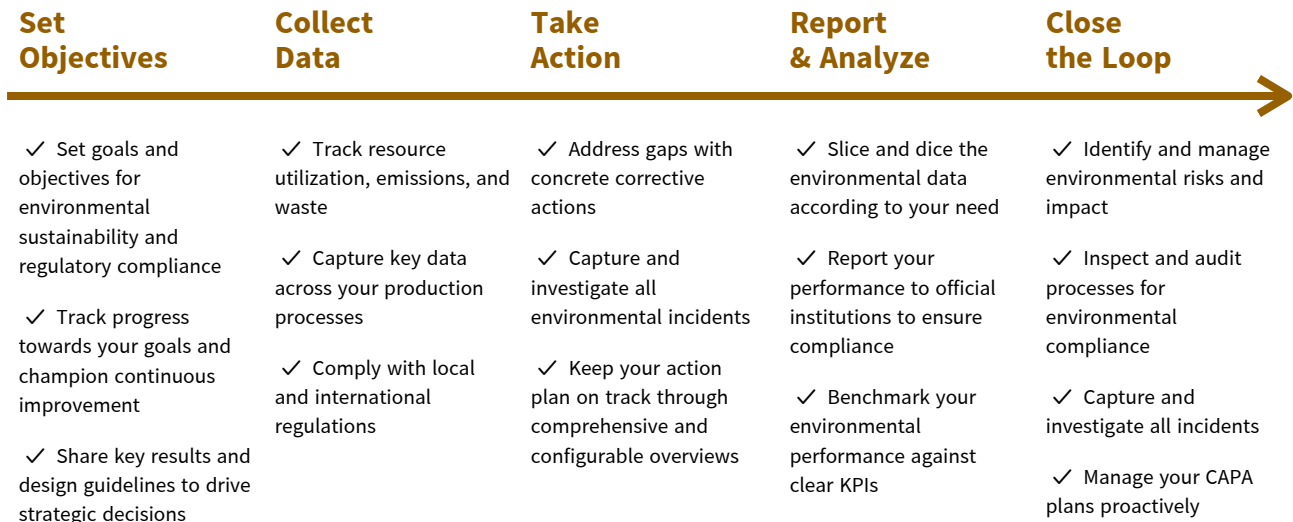

Simplify Your Environmental Reporting

- Monitor your energy consumption, including fuels, electricity, steam, hot water and oil, and renewables
- Track and manage your water, waste, and chemicals to ensure environmental compliance
- Gather and view your environmental data on emissions, energy consumption, water and waste in a central location
- Effortlessly track your performance and identify areas for improvement.
- Report to relevant parties (e.g. B Corp) in a structured way to gain and maintain certifications

Manage Emission Calculations and Inventories

- Calculate emissions based on reusable calculation profiles, supported by a ready-made library of formulas and emission factors
- Keep track of emissions per source, source type, process unit, or production period
- Fully comply with government regulations by reporting emissions in an official format (out-of-the-box compliance with Texas regulations).

The TenForce Environmental Reporting Process

Set Objectives	Collect Data	Take Action	Report & Analyze	Close the Loop
✓ Set goals and objectives for environmental sustainability and regulatory compliance	✓ Track resource utilization, emissions, and waste	✓ Address gaps with concrete corrective actions	✓ Slice and dice the environmental data according to your need	✓ Identify and manage environmental risks and impact
✓ Track progress towards your goals and champion continuous improvement	✓ Capture key data across your production processes	✓ Capture and investigate all environmental incidents	✓ Report your performance to official institutions to ensure compliance	✓ Inspect and audit processes for environmental compliance
✓ Share key results and design guidelines to drive strategic decisions	✓ Comply with local and international regulations	✓ Keep your action plan on track through comprehensive and configurable overviews	✓ Benchmark your environmental performance against clear KPIs	✓ Capture and investigate all incidents
				✓ Manage your CAPA plans proactively
